Introduction

Mamobar Organics Pvt Ltd. is incorporated, under section 16 of the Companies Act, 2017 (XIX of 2017) as a private limited liability company with the Securities and Exchange Commission of Pakistan (SECP). Mamobar organics Pvt Ltd register the Nagar Chamber of commerce & industry.

Mamobar Organics Pvt Ltd works on the training /capacity building of farmers in the agricultural sector of the region. Its objective is to train local farmers with modern agricultural reforms so that they can increase their productivity according to this new agriculture based modern techniques. For this purpose, the Mamobar Organics has been providing its services for the past five years.

We are Gilgit- Baltistan based company providing a range of modern agricultural and farming solutions to farmers across Gilgit Baltistan.

Among the services we offer include.

- ✓ Design and construction of Greenhouses
- ✓ Climate smart Agriculture solutions
- ✓ Organic Farming
- ✓ Pre & Post Harvesting Techniques (Apricots, Apple and Cherry)
- ✓ Organic Farming
- ✓ Value addition & Processing (jam, Murraba and fruit speared)

FARM MANAGEMENT & FERTILIZER APPLICATIONS

At Mamobar Organics, we plan and manage farms for farmland owners to optimize production and maximize ROI. Our goal is to continually increase and improve the farm value to enhance production all year round.

Our farm management practices begin with soil testing, land clearing, plowing, tilling, manure and fertilizer application based on soil analysis results, acquisition of certified variety of seeds, planting at recommended and standard spacing, subsequent crop control and chemical application, harvesting, and marketing. We also help in acquiring land for a lease to get people with no land into farming.

GREEN HOUSE / TUNNEL /VERTICAL FARMING

We fix greenhouses, tunnel farming/ vertical farming, and maintenance services.

Greenhouses are climate control structures that allows farmers to grow and farm throughout the calendar year. Vertical farming in tunnels refers to the practice of growing crops vertically within enclosed tunnel structures. This approach maximizes the use of space by stacking crops vertically, often using hydroponic systems for cultivation. Tunnels provide a controlled environment where factors like temperature, humidity, and lighting can be optimized for plant growth. Vertical farming in tunnels allows for year-round production, protection from adverse

weather conditions, and efficient use of resources such as water and energy. It is particularly beneficial in urban areas with limited space for traditional agriculture and can contribute to

local food production and sustainability efforts.

Vegetables Commonly Grown in High Tunnels

PEPPERS

STRAWBERRIES

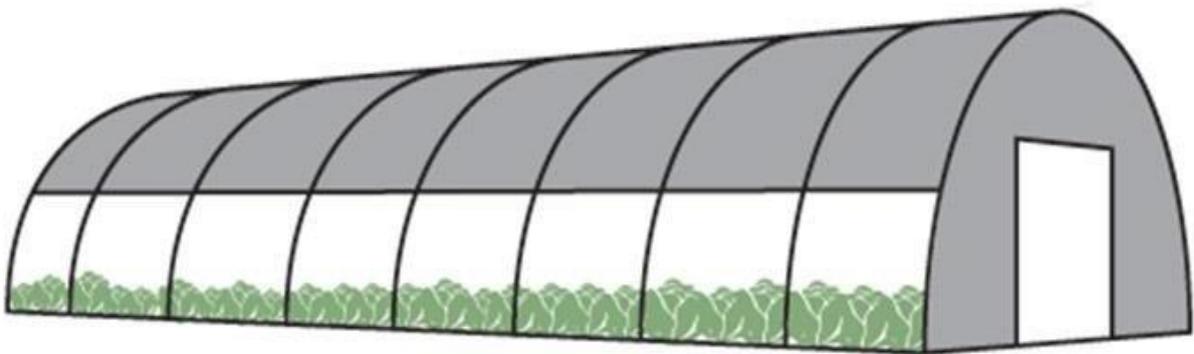

LETTUCE

TOMATOES

CUCUMBERS

TOMATO PLANTS GROW BEST BETWEEN
70-75 degrees
FAHRENHEIT.

CROPS GROWN IN
HIGH TUNNELS MUST
BE IRRIGATED.
